

2009 AGRICULTURAL CROP REPORT

MADERA COUNTY DEPARTMENT OF AGRICULTURE

TEN LEADING CROPS MADERA COUNTY 2009

Commodity	2009 Rank	2009 Dollar Value	2008 Rank
Grapes	1	\$225,837,000	2
Almonds, Nuts & Hulls	2	\$172,011,000	3
Milk	3	\$168,655,000	1
Pistachios	4	\$81,903,000	4
Cattles & Calves	5	\$40,543,000	7
Replacement Heifers	6	\$34,509,000	5
Nursery Stock	7	\$26,081,000	8
Alfalfa	8	\$25,243,000	6
Poultry	9	\$24,531,000	9
Pollination	10	\$19,458,000	-

Diversity, which serves to strengthen the agricultural economy of Madera County, is evident in this listing of our Ten Leading Crops, which include fruit and nut crops, milk, dairy and beef cattle, nursery stock, field crops, poultry and apiary pollination. The wide range of commodities produced in our county is further underscored by that segment on the chart entitled "Other," which includes such diverse products as cherries, berries, oranges, pomegranates, firewood, stone fruits and honey.

Madera County Department of Agriculture Weights and Measures

Robert J. Rolan, Agricultural Commissioner
Sealer of Weight and Measures

Jay Seslowe, Assistant Agricultural
Commissioner/Sealer

A. G. Kawamura, Secretary
California Department of Food and Agriculture

and

The Honorable Board of Supervisors
Frank Bigelow, Ronn Dominici, Vern Moss, Max Rodriguez, and Tom Wheeler

In accordance with the provisions of Section 2279 of the California Food and Agricultural Code, I am pleased to submit the 2009 Agricultural Crop Report. It must be emphasized that the values presented in this report reflect gross values only, and do not in any manner reflect net income or loss to producers.

In 2009, the total production value of Madera County agricultural crops and products dropped below the one billion dollar mark for the first time since 2004 to \$963,468,000. This represents a decrease of 26.5% from the level that was achieved in 2008.

After posting a record-setting year in 2007, the dairy industry began a decline in 2008 which continued through 2009. An entire year of low milk prices, high feed costs, and decreased demand for dairy products reduced the value of milk and milk products by more than 40% from the previous year. Similarly affected were the values of alfalfa, corn silage, and replacement heifers, which fell 50%, 52%, and 36%, respectively, from 2008 levels.

On the positive side, table grapes made a strong showing with a 75% increase in value despite reduced acreage. Cherries, peaches, walnuts, and other miscellaneous fruit and nut crops increased in value as did the entire vegetable crop category. However, increases in these and other categories were not sufficient to offset a combined quarter billion dollar reduction in value to three of our four principal commodities: dairy, almonds, and pistachios.

The preparation of a report of this type requires extensive collaboration, and I sincerely appreciate the contributions of our growers, the UC Cooperative Extension, and my staff. In particular, I would like to thank Senior Agricultural & Standards Inspector, Cha Vang, for his assistance with crop surveys throughout the year and for compilation of this report.

Respectfully Submitted,

A handwritten signature in black ink, reading "Robert J. Rolan". The signature is written in a cursive style with a long horizontal line extending to the right.

Robert J. Rolan
Agricultural Commissioner/
Sealer of Weights and Measures

a/ Madera County has 55 dairies, with 71,300 lactating cows

b/ Includes aquaculture, ducks, market eggs, hogs, manure, sheep, lambs and wool

Sustainable Agriculture Report 2009

PEST PREVENTION

Pest prevention programs are mandated by the California Food and Agricultural Code to prevent the introduction and spread of pests in California. Pest prevention involves three strata: pest exclusion, pest detection and integrated pest management.

The **Pest Exclusion Program** prevents the introduction of injurious pests that are not of common occurrence in the county.

During 2009, twenty-one nursery locations were inspected to ensure pest cleanliness. Over 60 shipments of plant materials, received by nurseries, were inspected for potentially injurious pests prior to retail sale.

Over 21,000 acres were surveyed for Red Imported Fire Ants, including commercial nurseries, recently-landscaped residential developments and orchards pollinated by out-of-state beehives. Over 4,700 acres are under treatment for Red Imported Fire Ants.

Countries receiving agricultural commodities require certification that the commodities are free from potentially injurious pests. Over 2,880 phytosanitary inspections were performed on Madera County commodities destined for export.

The **Pest Detection Program** utilizes insect traps and surveys for the detection of foreign pests which may have eluded exclusion efforts. Over 1,100 traps were deployed in the county, with over 10,900 trap servicings performed during the 2009 season. The trapping program in Madera County targeted multiple pests, including the following:

Apple Maggot

Gypsy Moth

Light Brown Apple Moth

Mexican Fruit Fly

Caribbean Fruit Fly

Japanese Beetle

Mediterranean Fruit Fly

Oriental Fruit Fly

European Corn Borer

Khapra Beetle

Melon Fruit Fly

The **Integrated Pest Control Program** strives to eradicate infestations of new pests before they become widespread. Pink Bollworm (*Pectinophora gossypiella*), a non-established and economically significant pest of cotton, is controlled by post-season plowdown of cotton plants. In 2009, plowdown of 330 acres of cotton was verified, ensuring the destruction of habitat supportive of this pest.

PEST MANAGEMENT

Glassy-Winged Sharpshooter, UC Extension

The **Glassy-winged Sharpshooter Program** serves to detect and control the vector of Pierce's Disease, a potentially catastrophic disease of vineyards. This program involved the placement of 698 traps, with 9,844 subsequent trap servicings. In addition, incoming shipments of host material and susceptible county plantings were inspected. Over 560 nursery shipments were inspected in 2009. On July 23, 2009, two Glassy-winged Sharpshooters were found in a nursery. Our office deployed 181 delimitation traps in and around the nursery. Subsequent trap servicings and visual surveys of the nursery during the months of July and August of 2009 revealed no additional Glassy-winged Sharpshooters.

The **Vertebrate Pest Management Program** provides expertise and materials, to growers and homeowners, for the control of certain depredating vertebrate pests.

Forty-six **Organic Farms**, totaling approximately 5,300 acres, two handlers and one processor, were registered in Madera County in 2009. Utilizing organic principles defined in the California Organic Products Act of 2003, these farms produce a wide array of commodities, such as:

alfalfa, almonds, apples, apricots, artichokes, arugula, basil, green beans, beets, berries, broccoli, brussels sprouts, cabbage, cantaloupe, carrots, chard, cherries, cilantro, collards, sweet corn, cucumbers, dill, eggplant, fennel, figs, garlic, grapes (table, raisin, wine), herbs, honeydew, kale, kiwi, kohlrabi, leeks, lettuce, okra, onions, oranges, parsley, parsnip, peaches, peas, peppers, pistachios, dried plums, pomegranates, potatoes, prickly pear, radish, spinach, squash, tomatoes, turnips, watermelons, zucchini.

The value of organic production in Madera County during 2009 was **\$17,452,000.**
